GUI steps Used

1: Open Firewall setting through control panel

2: Go to advance settings present on left panel

3: In advance setting Go to inbound rules and on right panel we can "new rule" under action click on it and change rules as mentioned

4: check cmd if our applied rule is working or not (in task case check telnet working or not)

5:After completing task successfully go back to inbound rules tab and right click on the rule and delete it
